

Bosch Elevator Cloud

BOSCH

Invented for Life

As a service platform for elevators, the Bosch Elevator Cloud combines a comprehensive range of services for the optimized and efficient operation of elevators.

These include Elevator Monitoring, Emergency Call, Visual Inspection and Risk Assessment. All applicable standards and guidelines are taken into account during the execution of the service.

Elevator Monitoring

An easily retrofitted sensor box constantly monitors the status, functions and important operating parameters of the elevator. Malfunctions are detected and reported immediately, so that measures for interference can be initiated immediately.

Emergency Call

Trained staff can be reached around the clock via the Emergency Call to provide telephone assistance to trapped persons and to arrange an immediate release.

Visual Inspection

The regular inspection of the elevator installations ensures safe and proper operation and, in addition, demonstrates compliance with the obligation to operate.

Risk Assessment

The risk assessment determines the hazardous state of the elevator installations. A health and safety professional documents any risks as well as measures to be taken and deadlines to remedy those.

Bosch Elevator Cloud at a glance

30 years of experience with own control centres

EN50518 and VdS certified control centres

Partner network of 180 intervention partners

24/7 availability of the monitoring center

Tailor-made solutions
