

Elevator Monitoring

BOSCH
Invented for Life

Discover the services of the **Bosch Elevator Cloud**:

Elevator Monitoring

Emergency Call

Visual Inspection

Risk Assessment

Elevator Monitoring is a solution of the Bosch Elevator Cloud – the service platform for smooth elevator operation.

The unique combination of hardware, software and services efficiently controls all processes around your elevators with the help of real-time data. With the aid of an easily installed sensor box, operating parameters and malfunctions are transmitted into the cloud and analyzed there. Appropriate measures, such as necessary repairs, will be initiated, coordinated and fully documented.

Components of the solution

Sensor box for data acquisition

- Acquisition of status and data of the elevator
- Plug & Play: easy installation
- For all elevators – regardless of manufacturer, model, and age

Web portal for central overview

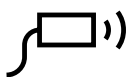

- Collection and analysis of operational data in the cloud
- Reducing downtime by indicating status, door function, floor, cabin position and emergency stops
- Comprehensive reportings

Services for business optimization

- Documentation of critical events
- Coordination of repairs or maintenance
- Individual service concepts (e.g. maintenance recommendations)

My elevators at a glance

Monitoring of the operation of the elevator: reduction of downtime and increased safety

Determining optimum maintenance times using operating data

Comprehensive reports for your elevators

Performance comparisons of elevators
